# Cisco Webex Teams

## Questions?

Use Cisco Webex Teams to chat with the speaker after the session

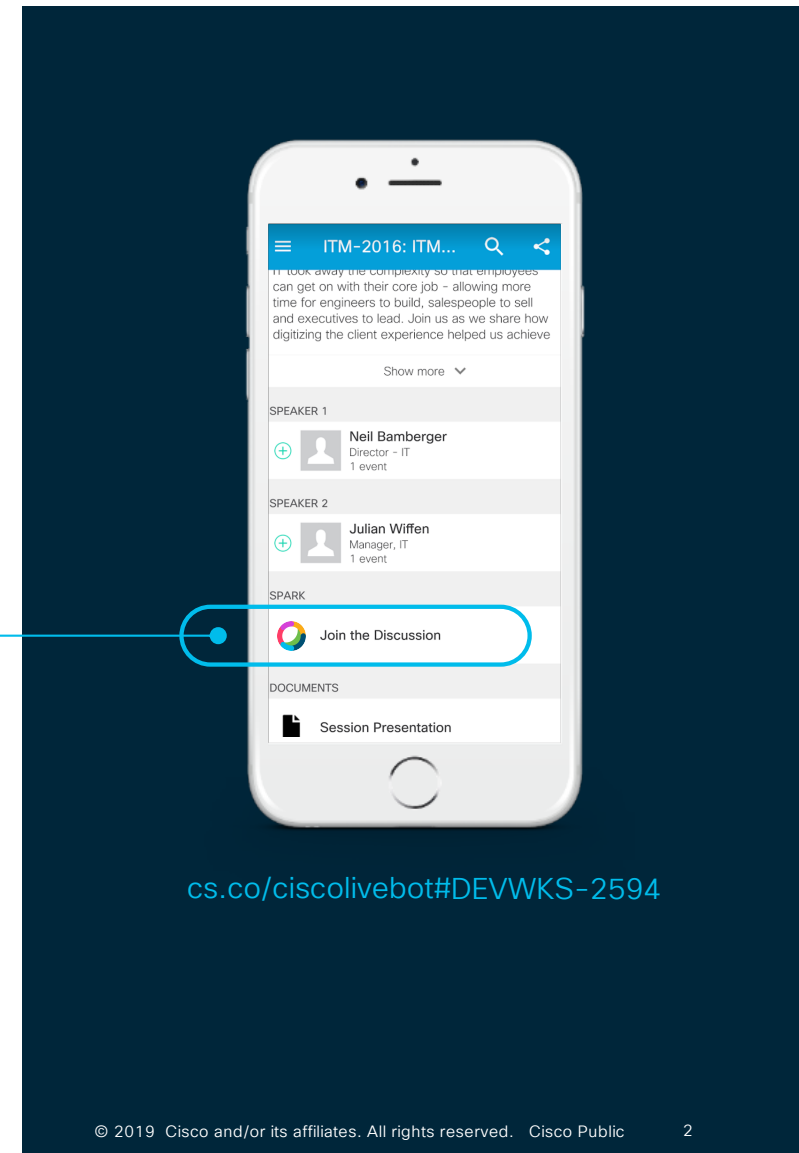

## How

- 1 Find this session in the Cisco Live Mobile App
- 2 Click “Join the Discussion”
- 3 Install Webex Teams or go directly to the team space
- 4 Enter messages/questions in the team space

Webex Teams will be moderated by the speaker until June 16, 2019.

# Leveraging NX-API for Customized Operational Analytics

Dr Tim Miller, Virtual CSE DC/Cloud  
@broadcaststorm  
DEWKS-2594

**Cisco** *live!*  
June 9-13, 2019 • San Diego, CA

#CLUS

# Agenda

- Introduction
- NX-API Overview
- Metrics and Monitoring
- Hands On
- Conclusion

# The Remainder of our 45 Minutes

- Who You Are
  - Command Line Fighter Pilot
  - Know your network
  - Have your favorite set of metrics
- What You'll Learn
  - Translate CLI to Python programming
  - Plethora of monitoring tools
  - Parsing and graphing the metrics

# Parsing CLI Output

## Vintage style versus Hip style

```
Software
  BIOS: version 07.59
  NXOS: version 7.0(3)I7(3)
  BIOS compile time: 08/26/2016
  NXOS image file is: bootflash:///nxos.7.0.3.I7.3.bin
  NXOS compile time: 2/12/2018 13:00:00 [02/12/2018 19:13:48]

Hardware
  cisco Nexus9000 C9372PX chassis
  Intel(R) Core(TM) i3- CPU @ 2.50GHz with 16400992 kB of memory.
  Processor Board ID SAL18516SA8

  Device name: spine-1
  bootflash: 51496280 kB
  Kernel uptime is 0 day(s), 0 hour(s), 5 minute(s), 17 second(s)
```

```
{
  "bios_ver_str": "07.59",
  "kickstart_ver_str": "7.0(3)I7(3)",
  "bios_cmpl_time": "08/26/2016",

CiscoLive!

# NX-API CLI is Secure

- Users must have the correct device role to use NX-API CLI.
- For example, a read-only role will not be able to make changes using NX-API CLI.

# NX-API CLI Has Many Use Cases

- Check versions of multiple switches in one command
- VLAN provisioning
- Poll routing table to watch for flapping routes
- Poll MAC address table for end point tracking
- Collect LLDP/CDP data to build wiring maps
- Couple collection of structured output with database backend for more advanced applications

# NX-API CLI Demo!

You make networking **possible**

# Connecting to Local N9KV Developer Sandbox

- Developer Sandbox is running on `http://localhost:23456/`
  - Username/Password is `admin/admin`
- May have to permit Flash in Chrome (next slide)
  - When connecting to the Developer Sandbox URL above, you'll get a warning that Flash is needed
  - OR... the "Python" button in the lower left request box does not produce Python text

# Allowing Chrome to Use Flash for URL

The image illustrates the process of allowing Flash for a specific URL in Chrome through a series of steps:

- Open the Chrome menu and select **Settings**.
- Search for **flash** in the settings search bar.
- Click on **Content settings** to view the Flash settings.
- Under the Flash settings, the default is **Block sites from running Flash**.
- Click on the **Ask first (recommended)** toggle to turn it on.
- Click the **ADD** button next to the 'Ask first' setting.
- In the **Add a site** dialog, enter the URL **http://localhost:23456/** and click **ADD**.

# Metrics

You make the power of data **possible**

# Anatomy of Metrics Analytics

- Service to monitor
- Metric Generation
- Metric Collection
- Metric Storage
- Metric Visualization
- Browser to view it all

# Metrics Generation

- Time Series Data
  - We are collecting measurements at regularly points in time
  - Name of Metric, Time Stamp, Metric Value, Metric Labels (units, source)
- Different Types of Metrics
  - Gauges
  - Counters
  - Timers (StatsD)
  - Histogram (Prometheus)
- Generators can be kernel level data, real time measurements, or calculated values

# Prometheus

- Collection occurs via pull model over HTTP
  - Pushgateway exists for short-lived services or batch jobs
- Supported for service discovery (DNS, K8s, etc.)
- Data model for multi-dimension storage of time series data
  - Metric name, key/value pairs
  - Designed with microservices in mind
- <https://prometheus.io/docs/introduction/overview/>

# One Python Script to Rule Them All

You make the power of data **possible**

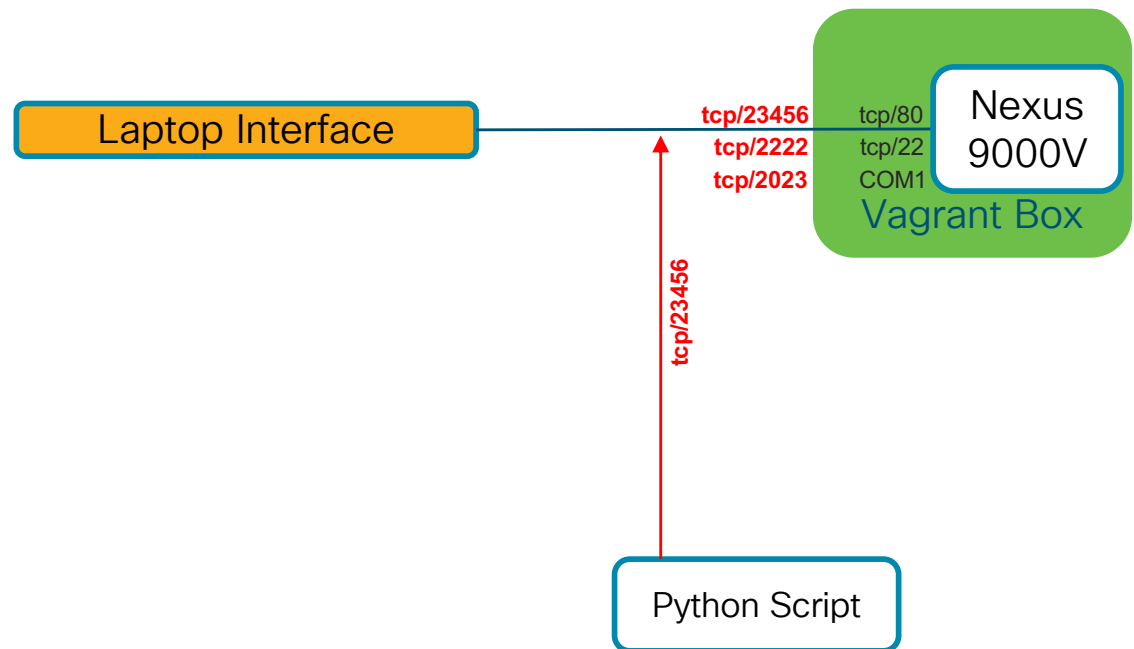

Stop! Python  
Time...

You make multi-cloud **possible**

Cisco *live!*

# Metric Collection Service Connectivity Diagram

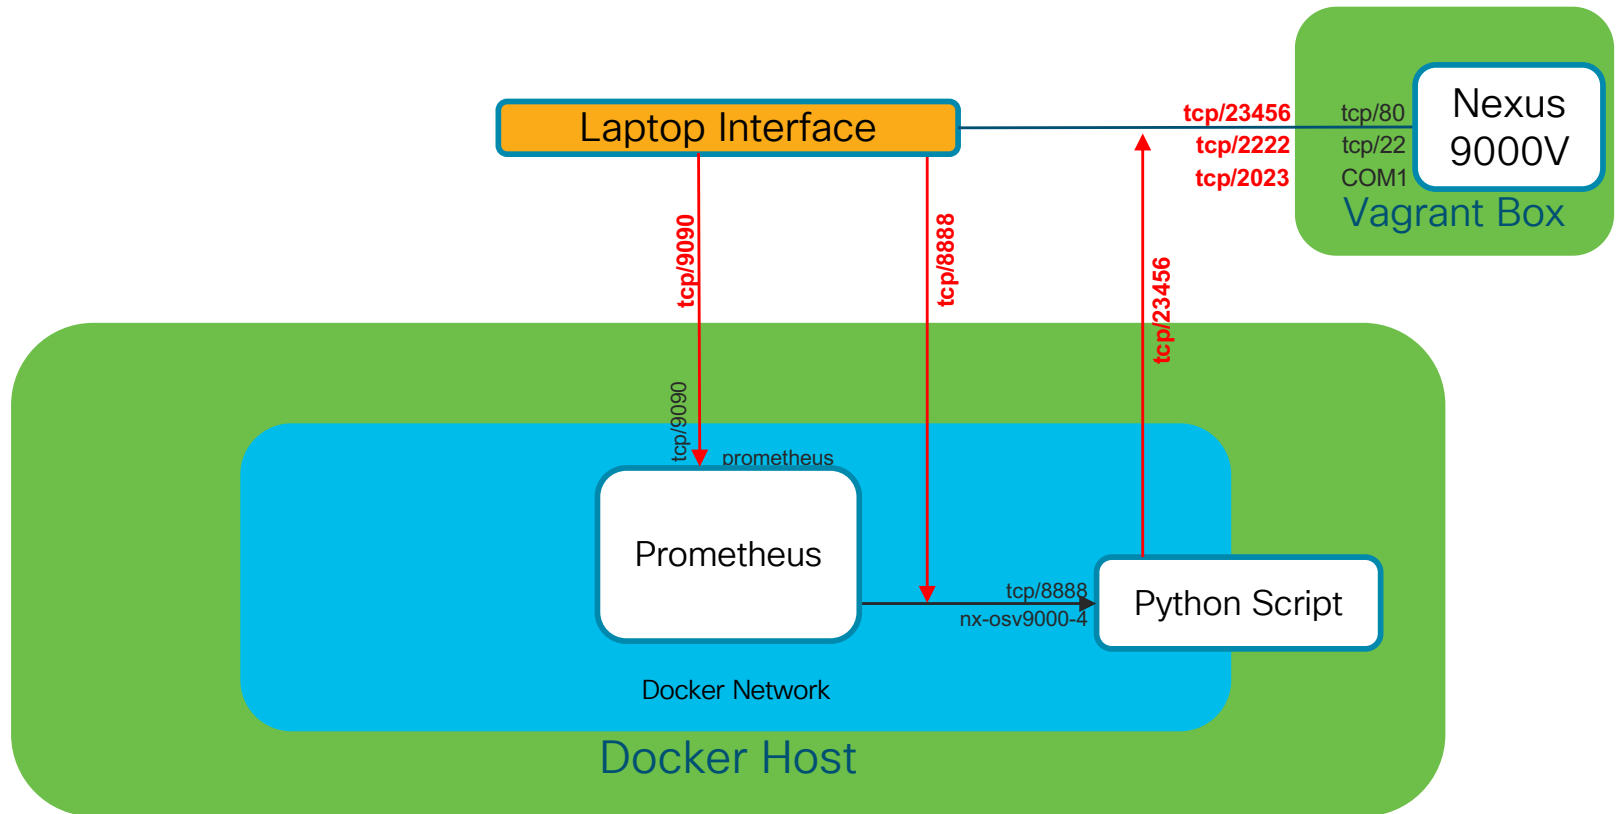

## Step-01 – Verify and Test Metric Generation

- Done for you:
  - Vagrant Box Nexus 9000v started
  - NXAPI and iCAM NX-OS features enabled
  - Workshop Git repo checked out to workspace folder
  - Python 3 modules populated
- Run script
  - `source ${HOME}/workspace/python/venv3/bin/activate`
  - `cd ${HOME}/workspace/DEVWKS-2594-CLUS19/nxapi_cli/step-01`
  - `python generate_l2table.py`

# Metric Collection Service Connectivity Diagram

## Step-02 – Collect metric in Prometheus

- Build Docker image of Collector script

```
docker build -t devwks-2594/publish_l2table:latest -t devwks-2594/publish_l2table:1 .
```

- Create Docker network

```
docker network create --driver=bridge --subnet=192.168.254.0/24 \  
--gateway=192.168.254.254 --attachable demo0
```

- Deploy Prometheus container

```
docker run --name prometheus -d --network demo0 -p 127.0.0.1:9090:9090 \  
-v ${PWD}/prometheus.yml:/etc/prometheus/prometheus.yml \  
quay.io/prometheus/prometheus
```

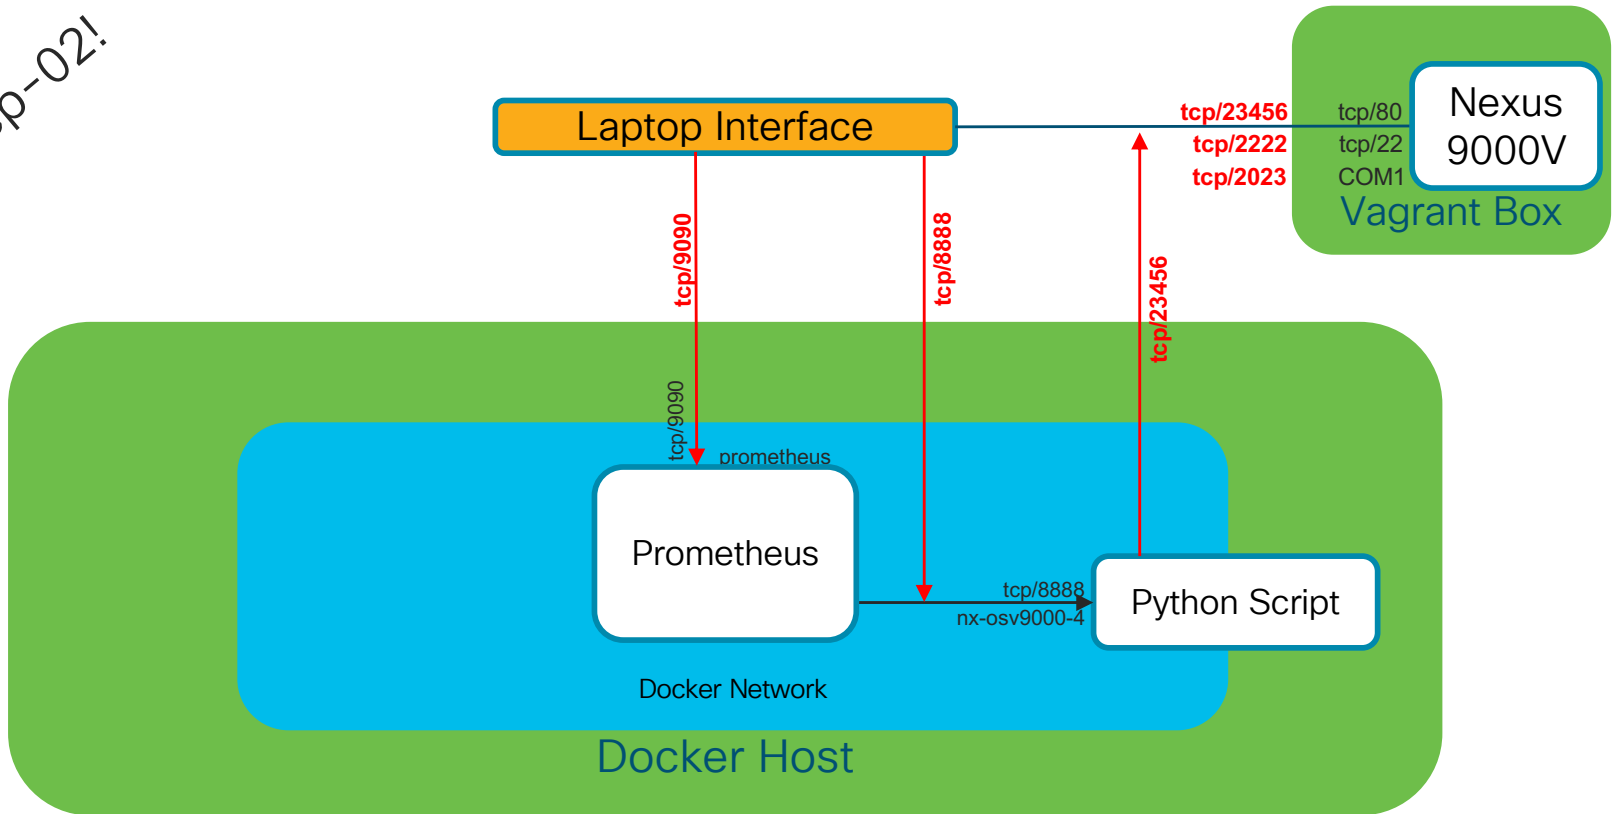

- Deploy Collector container

```
docker run --name collector -d --network demo0 -p 127.0.0.1:8888:8888 \  
devwks-2594/publish_l2table
```

# Metric Collection Service Connectivity Diagram

Same as Step-02!

# Step-03 – Expand metrics collected

## Refactor Python Code

- Clean up from step-02 (cleanup\_step02.sh)
- Build Docker image of Collector script

```
docker build -t devwks-2594/step-03:latest -t devwks-2594/step-03:1 .
```

- Deploy Prometheus container

```
docker run --name prometheus -d --network demo0 -p 127.0.0.1:9090:9090 \  
    -v ${PWD}/prometheus.yml:/etc/prometheus/prometheus.yml \  
    quay.io/prometheus/prometheus
```

- Deploy Collector container

```
docker run --name icam -d --network demo0 -p 127.0.0.1:8888:8888 \  
    devwks-2594/step-03
```

# Metric Service Connectivity Diagram

## Step-04 – Routing Metrics and Sandbox

- Clean up from step-03 (cleanup\_step03.sh)
- VPN to the DEVNET Sandbox using instructions

- Build Docker image of Collector script

```
docker build -t devwks-2594/step-04:latest -t devwks-2594/step-04:1 .
```

- Deploy Prometheus container

```
docker run --name prometheus -d --network demo0 -p 127.0.0.1:9090:9090 \  
-v ${PWD}/prometheus.yml:/etc/prometheus/prometheus.yml \  
quay.io/prometheus/prometheus
```

# Step-04 – Routing Metrics and Sandbox

- Deploy 4 collector container instances

```
docker run --name nx-osv9000-1 -d --network demo0 -p 127.0.0.1:8891:8888 \  
  -e "NXAPI_HOST=172.16.30.101" -e "NXAPI_PORT=80" \  
  -e "NXAPI_USER=cisco" -e "NXAPI_PASS=cisco" \  
  devwks-2594/step-04
```

```
docker run --name nx-osv9000-2 -d --network demo0 -p 127.0.0.1:8892:8888 \  
  -e "NXAPI_HOST=172.16.30.102" -e "NXAPI_PORT=80" \  
  -e "NXAPI_USER=cisco" -e "NXAPI_PASS=cisco" \  
  devwks-2594/step-04
```

# Step-04 – Routing Metrics and Sandbox

- Deploy 4 collector container instances

```
docker run --name nx-osv9000-3 -d --network demo0 -p 127.0.0.1:8893:8888 \  
-e "NXAPI_HOST=172.16.30.103" -e "NXAPI_PORT=80" \  
-e "NXAPI_USER=cisco" -e "NXAPI_PASS=cisco" \  
devwks-2594/step-04
```

```
docker run --name nx-osv9000-4 -d --network demo0 -p 127.0.0.1:8894:8888 \  
-e "NXAPI_HOST=172.16.30.104" -e "NXAPI_PORT=80" \  
-e "NXAPI_USER=cisco" -e "NXAPI_PASS=cisco" \  
devwks-2594/step-04
```

# Step-04 – Routing Metrics and Sandbox

- Deploy Grafana instance

```
docker run --name grafana -d --network demo0 \  
    -p 127.0.0.1:3000:3000 \  
    grafana/grafana
```

# Summary

You make networking **possible**

# Summary

## What We Have Done

- Use your favorite CLI show commands to script metric generation
- Leverage containers to perpetually generate them
- Collect and visualize those metrics via next generation tools

## What You Can Do

- Leverage DevNet resources to learn more about all of this
  - Python, Containers, Kubernetes, Git, Visualization, etc.
- Ease your operational pains

# Complete your online session evaluation

Cisco *live!*

- Please complete your session survey after each session. Your feedback is very important.
- Complete a minimum of 4 session surveys and the Overall Conference survey (starting on Thursday) to receive your Cisco Live water bottle.
- All surveys can be taken in the Cisco Live Mobile App or by logging in to the Session Catalog on [ciscolive.cisco.com/us](https://ciscolive.cisco.com/us).

Cisco Live sessions will be available for viewing on demand after the event at [ciscolive.cisco.com](https://ciscolive.cisco.com).

# Continue your education
